

One source,  
many solutions.

Health Safety Environment Australia Pty Ltd offers a unique service to industry and government: a single source for a diverse range of health, safety and environmental risk analysis and assessment services.

With a team of high calibre scientific and technical experts, HSE Australia provides a practical focus suited for fast, accurate and informed decision-making.

## One source, many solutions.

- Occupational Hygiene
- Occupational Health and Safety
- Environmental Solutions
- Laboratory
- Property Services
- Training

# Towards a healthier workplace

Significant penalties exist for organisations that fail to comply with industry regulations for hazardous substances and dangerous goods.

Thorough analysis and reporting by Occupational Hygienists at HSE Australia involves detailed management planning and review to drive a healthy working environment now and in the future.

We are skilled at testing for all types of contaminants – in the air, ground or water – and deliver comprehensive health risk assessments together with guidance on implementing safe work practices. Audits undertaken by HSE Australia are important for compliance.

# Minimise the health risks

The modern workplace is heavily regulated, which means organisations must operate within stringent occupational health, safety and welfare standards. Specialists at HSE Australia can identify and undertake risk assessments for a range of hazards present in the workplace.

Detailed reports are prepared with executive summaries that prioritise safety issues, and we also provide comprehensive management plans that outline measures required to make your workplace compliant. Our clients range from heavy industry, government and service companies to schools, hospitals and shopping centres.

## Occupational Hygiene

## Occupational Health and Safety

- hazardous substance risk assessments
- workplace monitoring (noise, vibration, illumination, heat and cold stress, ventilation, dust, gases and solvents)
- indoor air quality investigation
- dangerous goods – storage and handling assessments
- expert opinion
- biological contamination

- compliance and gap analysis of OHS management systems
- contractor safety audits
- develop OHSE procedures/manuals
- OHS training
- site, plant and machinery risk assessment

# Keeping up with the code

Some of Australia's largest companies and government agencies rely on HSE Australia to ensure their work practices are not having a negative impact on the environment. We undertake comprehensive compliance and gap analysis programs to check the adequacy of procedures, documentation and controls.

Our audits cover every aspect of environmental safety, with rigorous site assessments that highlight potential work practice issues that might impact negatively in both the short and long term. And we don't simply stop at the report stage – we recommend how improvements can be made and we are available to help implement the changes.

# Accredited testing

HSE Australia has a well equipped in-house laboratory with accredited and suitably qualified staff. Together with our strategic alliances with other testing facilities across Australia we assure a full and complete analytical program is available to every company's individual requirements.

This in-house resource ensures HSE Australia provides and manages a fully integrated testing facility to assist clients and our consultants in making qualified decisions and recommendations. Testing and analysis extends to all areas, including dust, particulates, asbestos fibre counting, air and soil quality, and monitoring for contaminants in water.

## Environmental Solutions

- compliance and gap analysis of existing programs
- environmental site assessments and due diligence audits
- contaminated site management programs
- underground storage assessments and remediation programs
- groundwater, surface water and wastewater monitoring and management programs

## Laboratory

- asbestos analysis and fibre counting
- groundwater, surface water and wastewater monitoring
- hazardous materials/substances analysis
- air quality assessments
- lead in paint analysis

# Is your building compliant?

Ensuring buildings comply with the appropriate Australian codes and standards is the main focus of our Property Services division.

We audit buildings for asbestos contamination and safety, and manage the entire process if removal is required.

Other services include safety audits of public areas in buildings such as shopping centres and council buildings. Our contractor safety audits and plans continue to lead contractor management programs across Australia. HSE Australia also has experience in managing building vulnerability ensuring appropriate controls and procedures are in place and implemented.

# Helping you take control

HSE Australia provides training in most areas of occupational health, safety and the environment. Our courses are tailored for particular industries and include overviews on legislative requirements, documentation and risk assessments.

Half day and full day sessions are available, with our suite of online programs continually growing. Through [www.clickontraining.com.au](http://www.clickontraining.com.au) and onsite programs a blended learning approach can be achieved cost effectively and quickly through an organisation.

## Property Services

- slip floor testing
- hazardous substance audits (asbestos, synthetic mineral fibres, chemicals etc)
- asbestos removal project management
- compliance auditing
- building maintenance audits
- disability discrimination act assessments

## Training

- online courses ([www.clickontraining.com.au](http://www.clickontraining.com.au))
- individually tailored onsite programs
- public workshops
- compliance management
- OHSE corporate strategy development and implementation

Lasting, integrated solutions  
designed, co-ordinated and  
delivered by a single team.
