

The drug cabinet in the brain

David Butler

www.noigroup.com

Aims

- **present some extraordinary gifts of neuroscience to rehabilitation**
- **introduce two new evidence based clinical applications**

The pain sciences revolution

Neuroscience/pain sciences `trendy`”

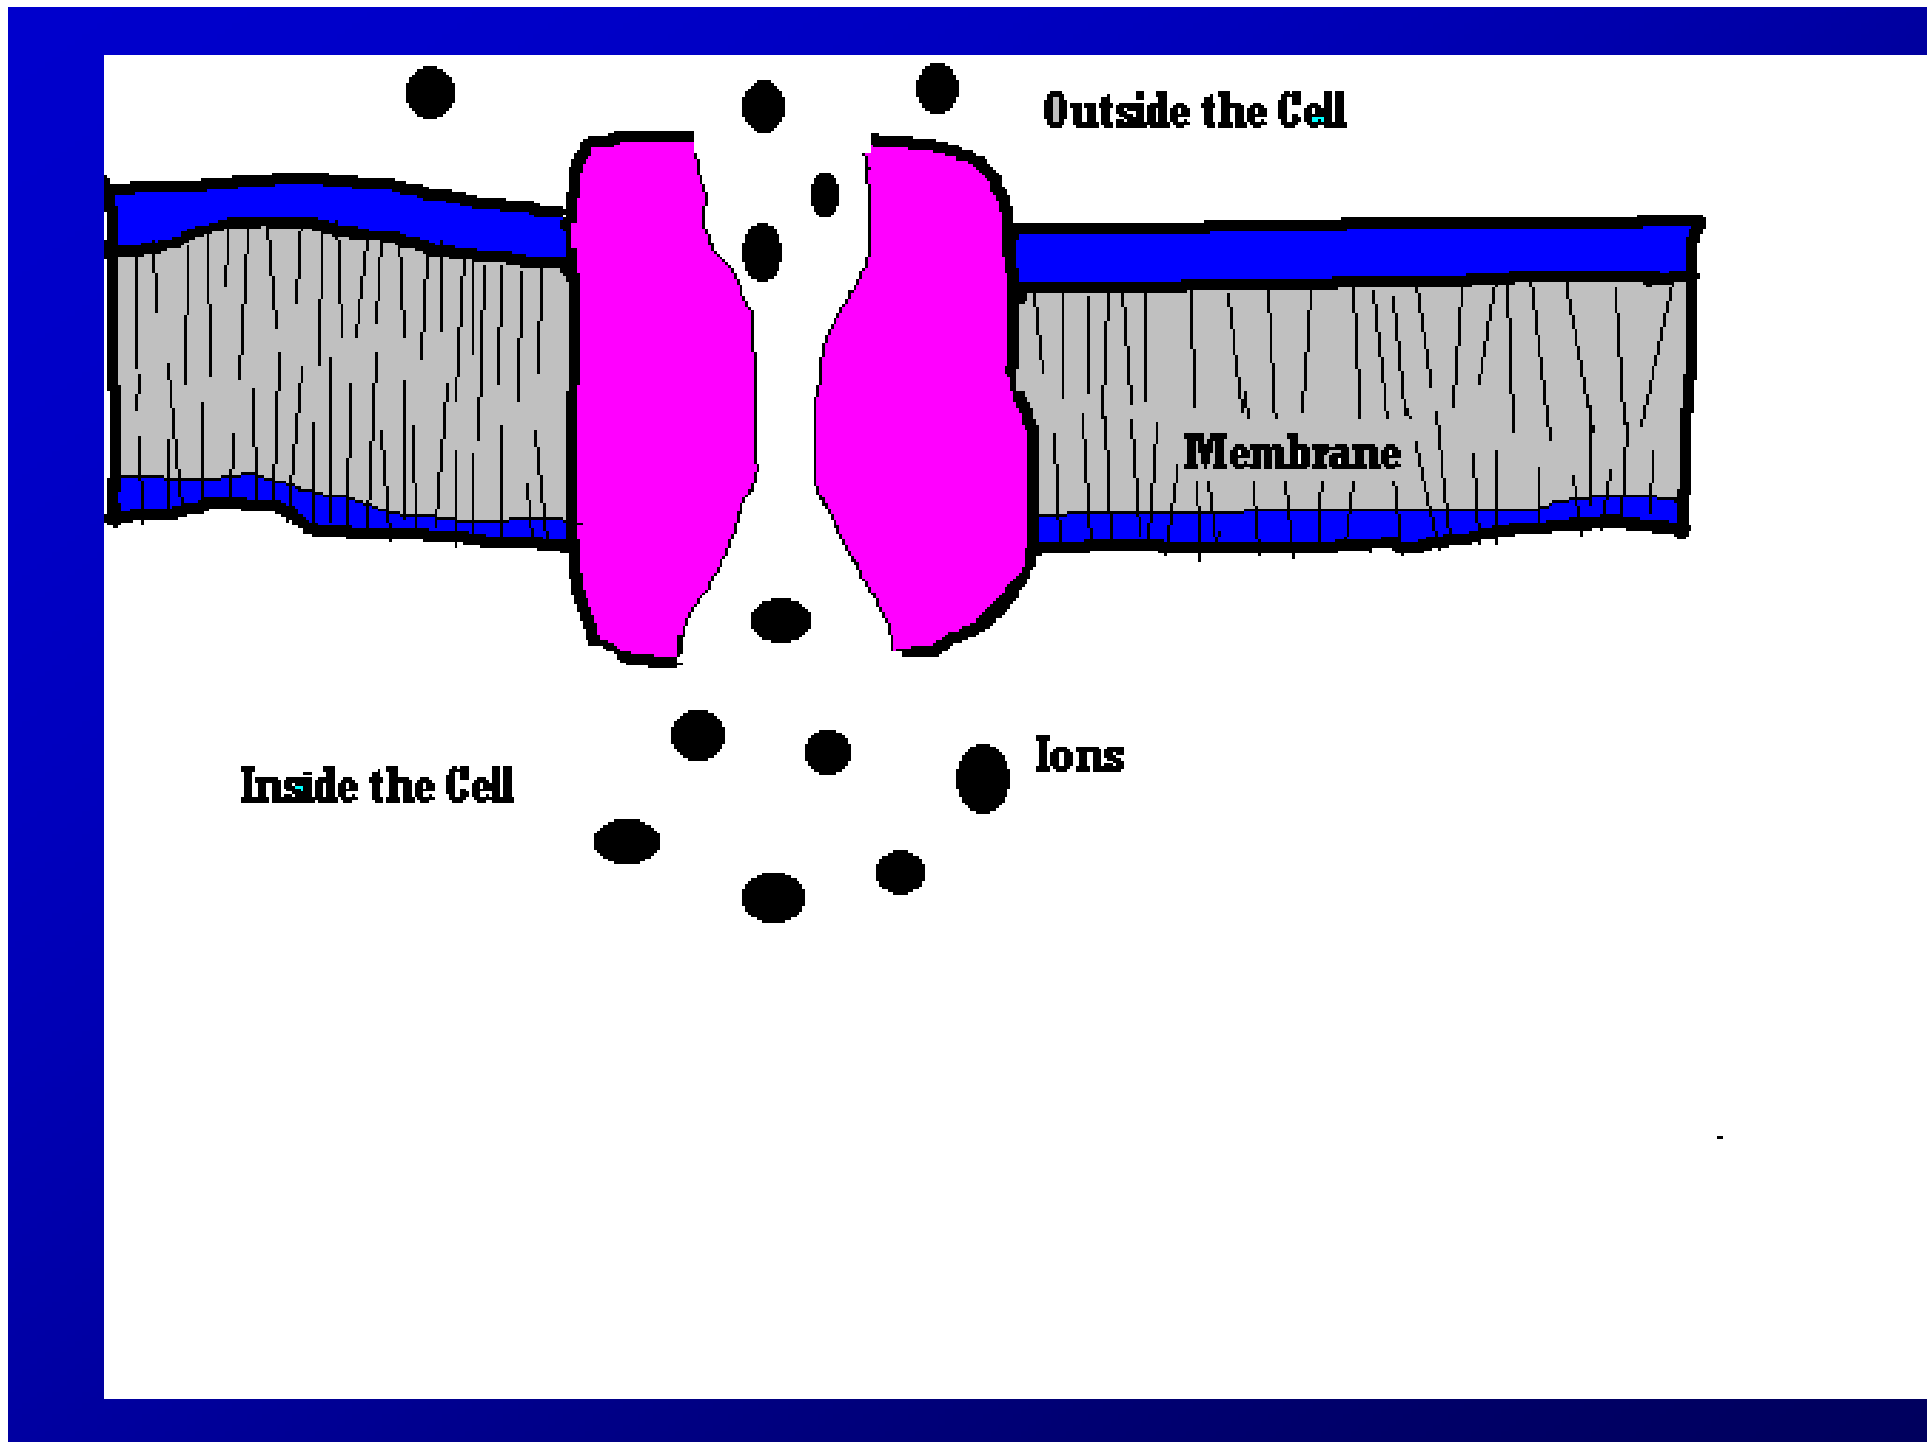

Gift 1 – the ion channel

“the molecular targets of rehab”

The neurone

Outside the Cell

Membrane

Inside the Cell

Ions

The ion channel

From Bear et al
2001

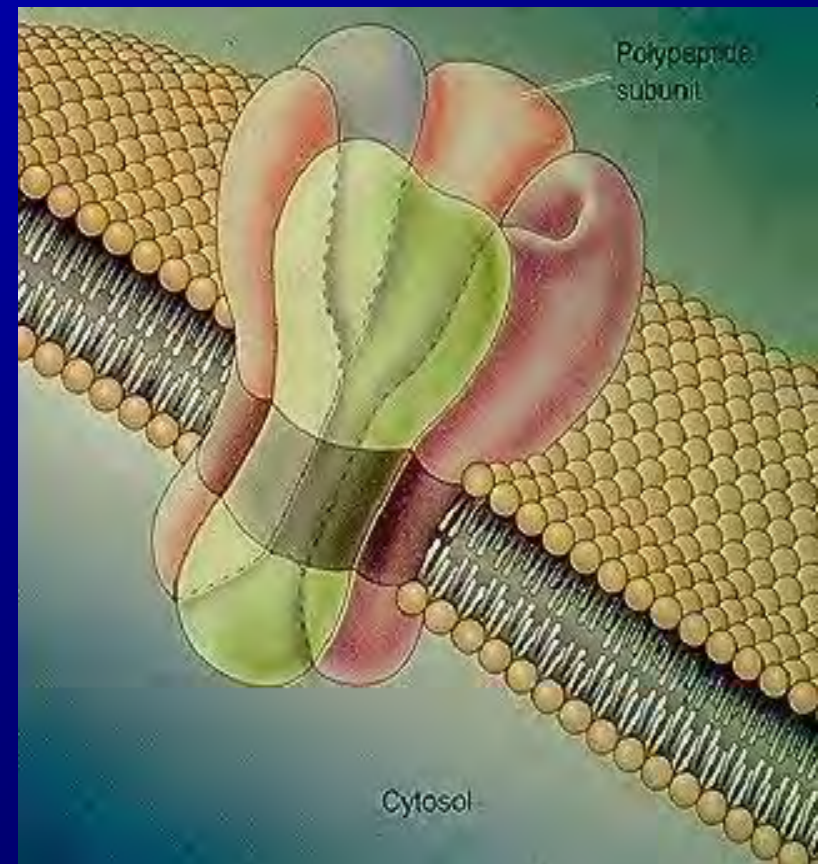

“DNA makes messenger RNA. Messenger RNA` makes proteins and proteins make us”

Your molecular biology degree

- Open or closed
- Many different kinds of sensors
- Live for two days, like butterflies
- Reflect your perceived needs

From Bear et al 2001

Gift 2 – the synapse

“only 100 years old”

Rejoice in your neurones and synapses

- 100 billion neurones
 - Up to 100,000 connections each
 - More possible connections than particles in the universe
 - Baby makes 3 million synapses per second
 - 200,000 km of cabling in the brain

From: Neuron 10 (1993) Front Cover

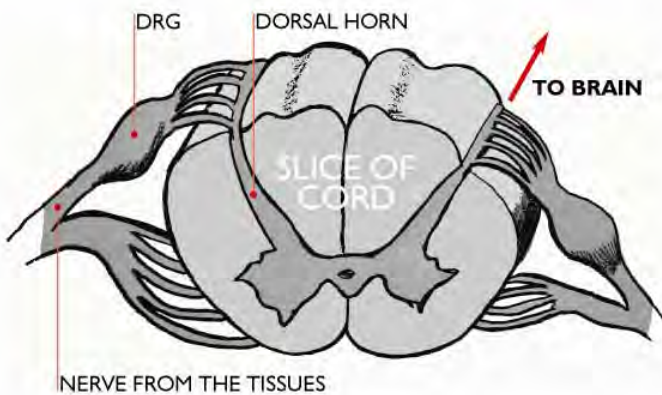

Would this hurt?

An astonishing synapse -the dorsal horn

ADAPTED FROM BEAR ET AL. 64

Gift 3 – The neuromatrix paradigm

“about 12 years old”

- Melzack’s neuromatrix
 - representation
 - Maps in the brain
 - The virtual body
- Schema – “body of knowledge”

Reflect on the phantom

CHARLES: TRUTH ABOUT ME AND AMILLA

EXCLUSIVE
The former footballer reveals how he and his wife Amilla have managed to stay together for 12 years. Charles is the only man to have been married to a former Wimbledon player. He also reveals how he and Amilla have managed to stay together for 12 years. Charles is the only man to have been married to a former Wimbledon player. He also reveals how he and Amilla have managed to stay together for 12 years.

How I used a train to chop off my leg

Sun EXCLUSIVE

GRAVE Sir Nathan told last night how he took his crippled leg on the path of a train to amputate it.
The 45-year-old, who has been married for 12 years, was struck by a train in 1982. He was left with a 10-inch leg. He has since become a professional tennis player.

"I had to do it" ... Sir Nathan recovering in hospital after his leg was amputated

The outer skin homunculus (map,
/representation in the brain)

Key elements of the neuromatrix paradigm

Four key points

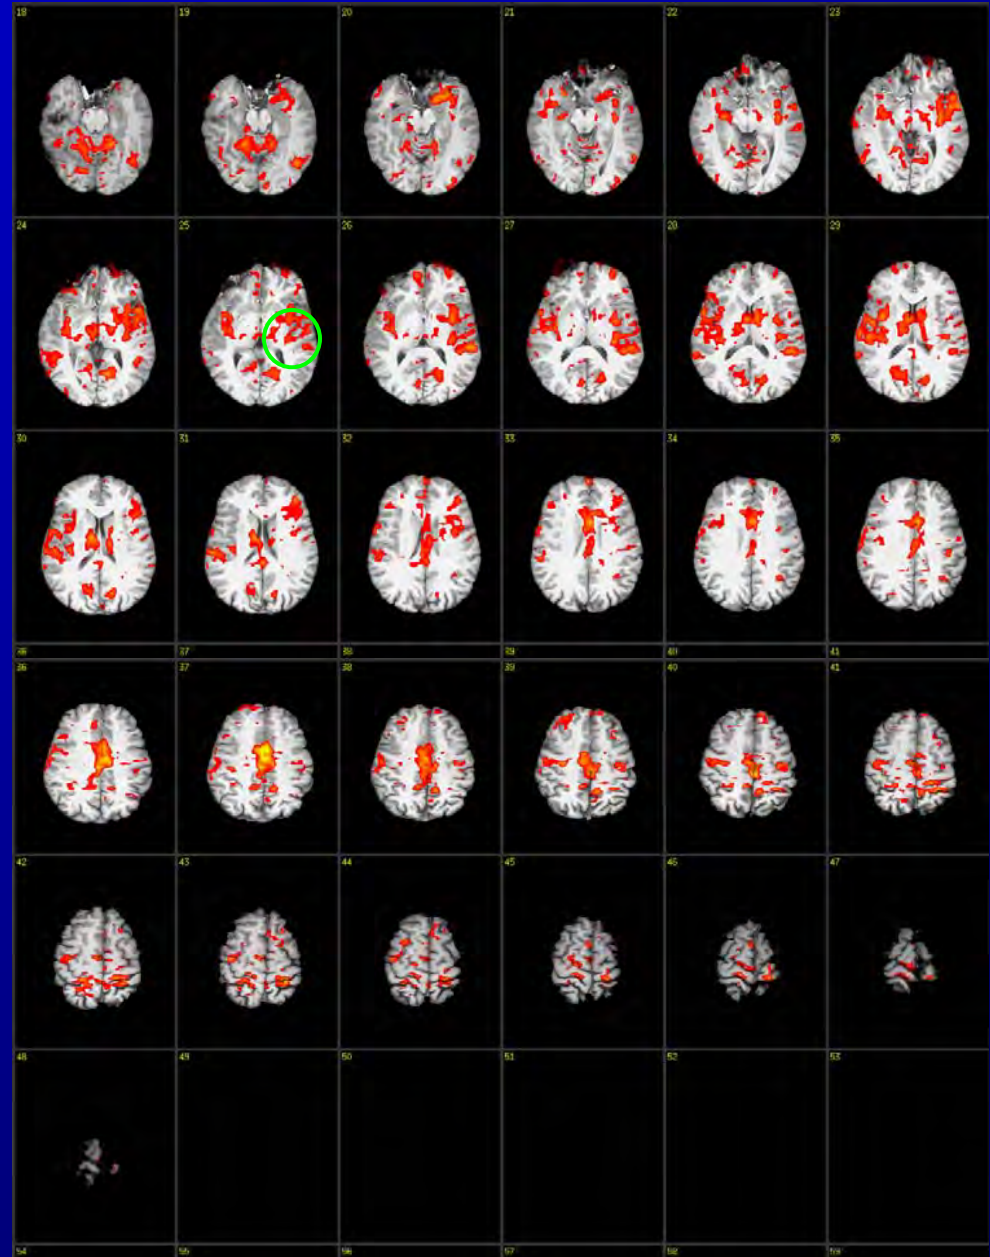

Key elements of the neuromatrix paradigm

1. Many bits of brain get turned on together

The brain activity which occurs when a person suffering chronic pain experiences pain during an attempt at an abdominal contraction

Courtesy Lozza

A possible pain or movement neurosignature

Note:

- No one “hub”
- Common but will vary
- Turned on together

Butler DS, Moseley GL 2003
Explain Pain

Key elements of the neuromatrix paradigm

1. Multiple brain areas ignite together creating neurosignatures
2. The specific tissue injured may not matter for a pain neurosignature

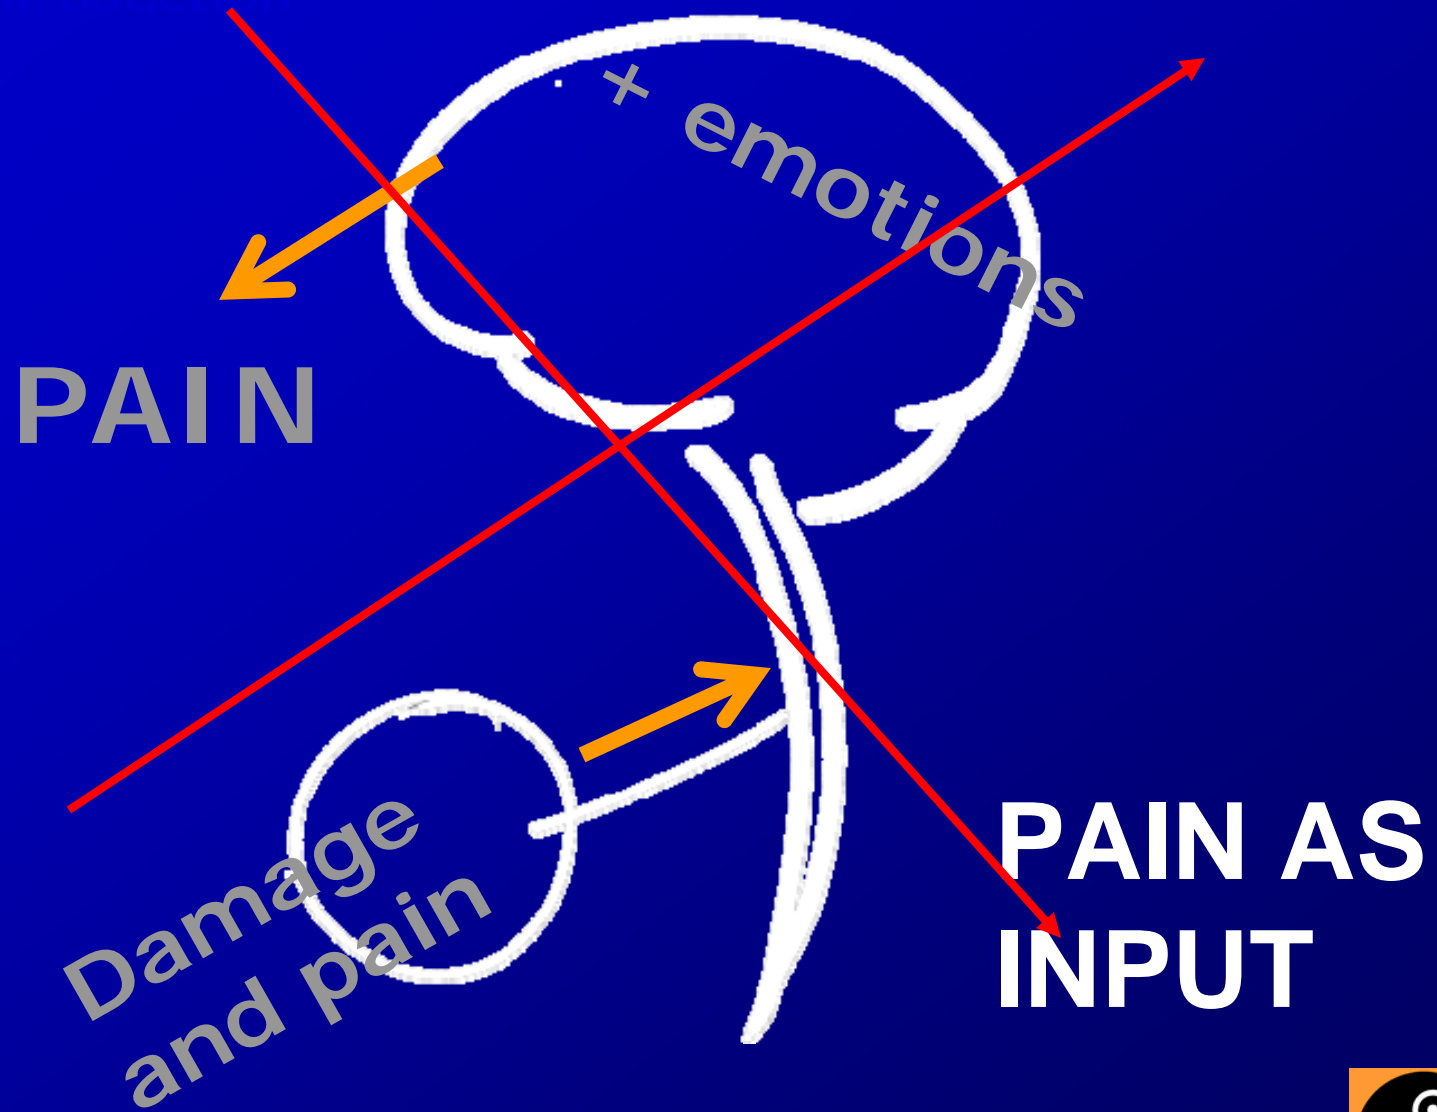

Pain neurosignatures are more related to threat rather than tissue injury

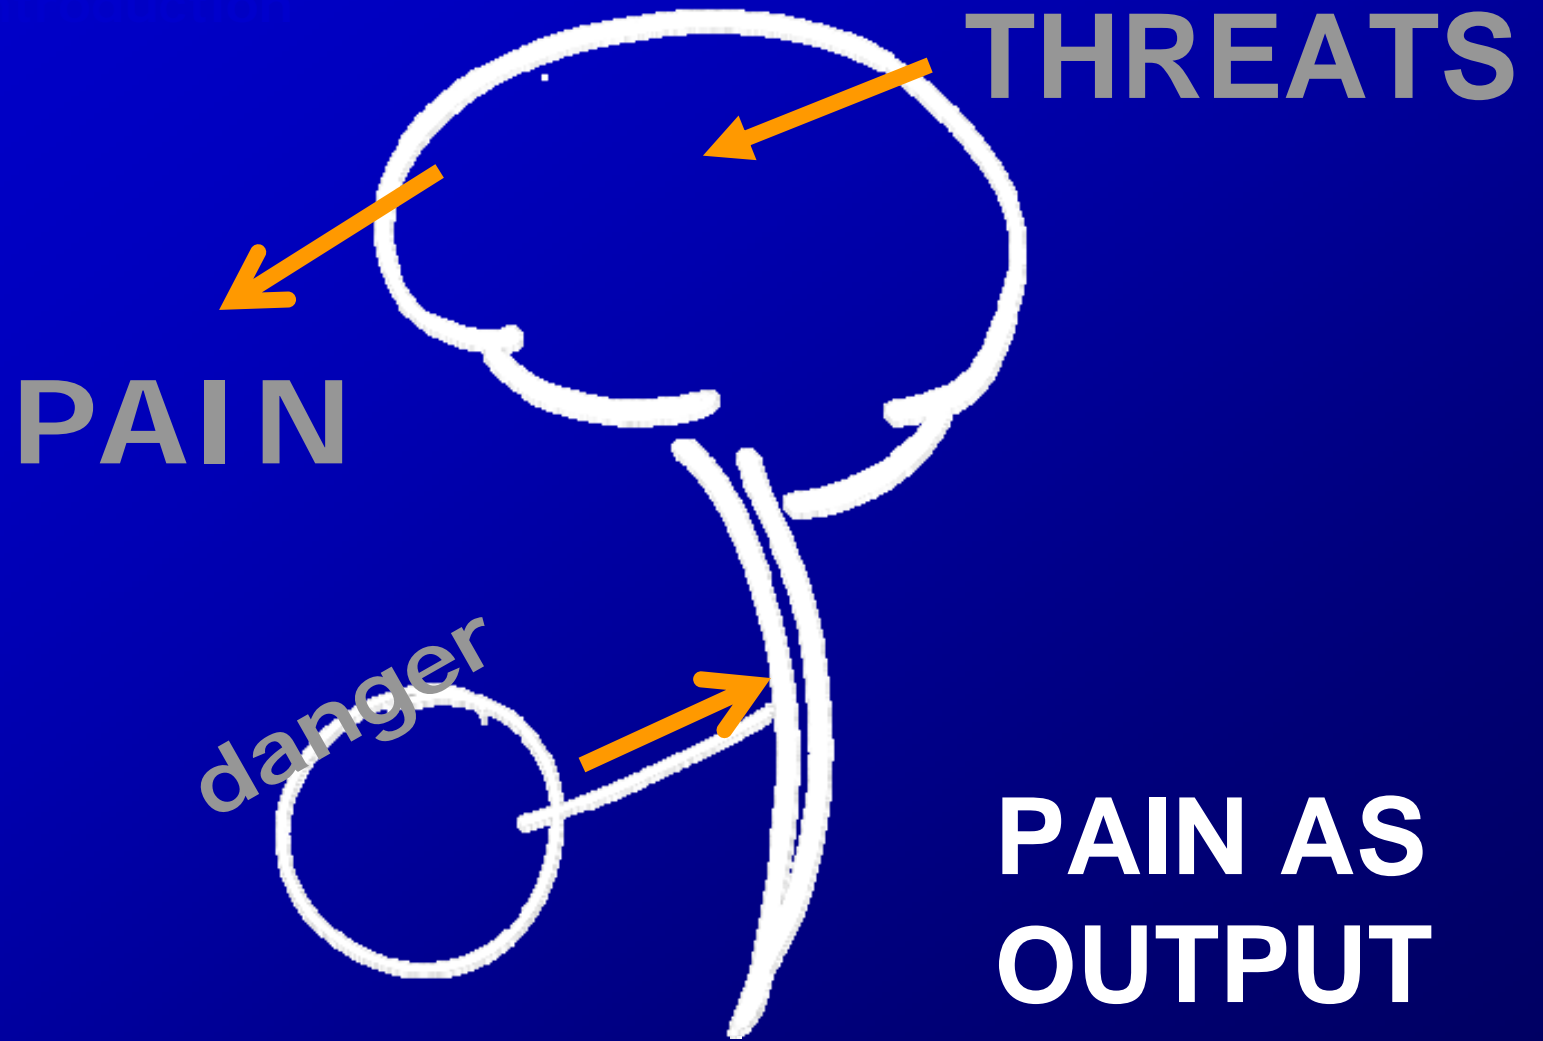

**PAIN AS
INPUT**

**Thoughts are
nerve impulses**

Key elements of the neuromatrix paradigm

1. Multiple brain areas ignite together creating pain representations
2. The specific tissue injured may not matter for a pain matrix
3. Pain representations are easily modified

**The
neurosignature
can be easily
modified:**

- turned up
- turned down
- ignited by
numerous stimuli
including mirror
neurons
